Craftmanship, unmatched precision, many versions, even for Factor, T47, Look Z65, ITA

World famous Sintered Disc Brake Pads Made in Czech Republic

A mountain bike rider in full gear, including a helmet and a dark blue long-sleeved jersey with 'ONEAL' on the chest, is performing a wheelie. The rider is on a white and blue mountain bike. The background is a forest scene. The image is overlaid with technical drawings of bicycle components, including a disc brake rotor and a brake pad. A large red vertical bar is on the right side of the image.

HIGH QUALITY INNOVATIVE PRODUCTS Made in TAIWAN

ZENO

DRIVEN PERFORMANCE

SPEEDLINK
Q-CONNECTOR
LITE

ZENO
 DRIVEN PERFORMANCE

M8° PD.75 Quick Release Pin Side
 with PD.75 endpiece for the most flexible system.
 Additional adaptor can fulfil all link type.

Q-Connector Lite + Speedlink Socket Side

ZENO Patented Hose Fix structure
 No need glue & hose bendin.
 Just Push In and tighten the Nut.
 Unlocked for most hose structure.

Stroke Pads Touching Distance Tuning

Hydraulic Pressure-Volume Adjuster
 Able to adjust the brake touch.
 Reverse: feeling power loss after long time riding.
 Through adjuster with internal brake piston back.

Head Pin
 Head: Guarantee of the fitting & connection.

Automatic Sealed Design
 No leaking risk in long distance use.

Q-Connector Lite Pre-Pressed Pin side
 (Connector only is given available for 140mm 142mm frame design)

Q-Connector Lite Socket side M8°PD.75
 Smallest open system Quick Release Connector.
 Length: 21.5mm. Diameter: 13.5mm.
 M8° PD.75 available for the most brake system.
 Add on adaptor can fulfil all link type.

NEW PRODUCT RELEASE

VANQUISH

D30[®] Protected

COMFORT OPTIMIZED V2.1 LOCK-ON GRIPS

For more than 40 years ODI has been dedicated to pushing the limits of technology to improve the riding experience. D30[®] has a long history of innovative protection against vibration and impact in a wide range of industries. So when the D30[®] material science and innovation lab reached out to find a home for their new innovative GRIP[™] compound we were excited about the possibilities. We immediately set out to build a grip that could maximize the anti-vibration and shock-absorption features.

We are proud to announce the product of this partnership - the new Vanquish Comfort Grips. Meticulously engineered and geometry tuned to harness the benefits of the D30[®] GRIP[™] material, removing shock and vibration so you can focus more on your ride.

2X
Vibration Damping

EXCLUSIVE D30[®] GRIP MATERIAL

Born from D30's material science and innovation lab which has engineered anti-vibration materials for applications from Formula 1 car chassis to the NASA Valkyrie robot, the new D30[®] GRIP[™] compound was developed and lab tested to reduce twice the vibration over standard compounds.

MULTI-LAYERED COMFORT

Created using decades of experience in grip design combined with extensive laboratory testing of the D30[®] GRIP[™] compounds to provide an optimal comfort drives experience. The grip features a progressive multi-layered grip pattern that further reduce shock and vibration inputs from being passed from the bike to the rider to allow longer rides with less hand pain or fatigue.

UNIQUE TRACTION PATTERN

Comfort is worthless if it comes at the expense of control. The VANQUISH grips feature a seamless transition from comfort to control using a unique variation of the time-tested waffle pattern coupled with convex traction pads, to maximize surface contact, so you feel connected with the bike without having to squeeze the grip.

V2.1 LOCK-ON CLAMPING SYSTEM

Built on the world's most secure grip system - the V2.1 Lock-On System technology allows for easy installation and removal combined with being a single clamping grip. Tested and approved by the top riders in the bicycle and powersports industries, our exclusive Lock-On technology frees up more grip space for your hands while ensuring that your grip stays exactly where you want it, at all times and in all conditions.

MICRO-FLANGE FOR ADDED PROTECTION

Small details can make a big difference. The VANQUISH grip features a small inside flange that is large enough to allow protection for your hands from in-board controls while also being small enough to not interfere with shifting or braking equipment.

DOUBLE-REINFORCED ENDS

The VANQUISH grips go beyond just adding protection for your hands with double-reinforced ends for added protection for your grips and bars. A layer of extra-tough TPE material extends 360° around the inner hard plastic grip end to prevent grip blowouts. This tougher material is exposed on the lower half of the grip providing even more protection in the area most likely to come into contact with the ground.

PRODUCT SPECS

PART NUMBER:	033V5_	COLORS:	ORANGE W/ BLACK CLAMP (033V50-B)	END STYLE:	REINFORCED CLOSED END
STYLE:	V2.1 LOCK-ON SYSTEM		BLACK W/ BLACK CLAMP (033V5B-B)	MSRP:	<input type="text"/>
MATERIAL:	D30 [®] GRIP [™] COMPOUND		GRAPHITE W/ GRAY CLAMP (033V5H-G)		
DIAMETER:	32.75MM
